No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          DB

The gene was isolated from genomic DNA by PCR amplification (see also AAX87659-61). The invention provides TI-gamma nucleic acids, proteins and antibodies, and methods of screening for TI-gamma modulators potentially useful for treating hyphal fungal infections and diseases caused by mutated TI-gamma, e.g. neurodegeneration involving anterograde axonal transport, such as Alzheimer's, Parkinson's or Huntington's diseases or amyotrophic lateral sclerosis. TI-gamma nucleic acids are also used to identify polymorphic variants, alleles, homologues etc. of TI-gamma, or other motor proteins, to generate protein structural models, for recombinant production of TI-gamma, as antisense molecules, to produce transgenic or knockout animals, and in gene therapy. Detection of TI-gamma allows differentiation between hyphal and non-hyphal fungal infections.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New nucleic acid encoding microtubule motor protein, used for diagnosis of fungal infection and neurodegenerative disease
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Sequence 2352 BP; 626 A; 564 C;

                                                                                                                                                                                                                                                       capable of detecting 1000 or more genes from Drosophila. The invent useful in developmental biology and in elucidating cell signalling cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL01840-ABL16175) and the encoded proteins (ABB57737-ABB72072).

The invention relates to human nucleic acids (AAI57798-AAI61369) and the encoded polypeptides (AAM38642-AAM42213) with nootropic, immunosuppressant and cytostatic activity. The polynucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral neuropathy and containing a polypeptide or polynucleotide of the invention may be used to treat diseases, peripheral neuropathy and containing a polypeptide or polynucleotide containing a polypeptide or polynucleotide contains, such as peripheral nervous injuries, peripheral neuropathy and containing the system disease, such as alzheimer's, parkinson's disease, Huntington's disease, amyotrophic contains and Shy-Drager Syndrome. Other uses include the utilisation of the activity, chemotactic/chemokinetic activity, haemostatic and thrombolytic activity, cancer diagnosis and therapy, drug screening, assaws for receptor activity, arthritis and inflammation, leukaemias and

                                                                                                                                                                                                                                                                                                                                                                         The invention relates to human nucleic acids (AAI57798-AAI61369) and CC the encoded polypeptides (AAM38642-AAM42213) with nootropic, immunosuppressant and cytostatic activity. The polynucleotides are useful CC in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral neuropathy and CC localised neuropathies and central nervous system diseases, such as CC Alzheimer's, Parkinson's disease, Huntington's disease, such as CC Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic CC lateral sclerosis, and Shy-Drager Syndrome. Other uses include the CC utilisation of the activities such as: Immune system suppression, CC Activin/inhibin activity, chemotactic/chemokinetic activity, haemostatic and thrombolytic activity, cancer diagnosis and therapy, drug screening, CC assays for receptor activity, arthritis and inflammation, leukaemias and CC N.S disorders.
                                                                                                                                                                                                                                                                                                  Query Ma

P-PSDB; AAY51328.

Nucleic acid sequences encoding a human kinesin-like motor protein (KLIMP) useful for the treatment of diseases associated with inappropriate KLIMP expression such as cancers, neurological disorders and disorders of vesicular transport.

Claim 6; Fig 1A-J; 38pp; English.

This invention describes a novel human kinesin-like motor protein

(KIIMP) (1) which has cytostatic, anti-Convulsant, anti-Alzahmer's,

(KIIMP) (1) which has cytostatic, anti-Convulsant, anti-Alzahmer's,

anti-Parkinsonian, antidiabetic, anti-ulcerative, immunomodulatory,

antilnflammatory, anti-AIDS, antirheumatic and antiarthritic activity.

(1) and the protein it encodes may be used in the prevention, treatment
and diagnosis of diseases associated with inappropriate KLIMP expression
such as cancers, neurological disorders and disorders of vesicular
transport. For example, (1) (and vectors containing (1) (Iv)) and the

KLIMP polypeptide may be used to treat disorders associated with
decreased KLIMP expression such as cancers (e.g. lymphoma, melanoma and
cancers of the breast lung and prostate), neurological disorders (e.g.
epilepsy, Alzheimer's disease and Parkinson's disease), disorders of of
vesicular transport (e.g. diabetes mellitus/insipidus, Grave's disease
and gastric/duodenal ulcers), and some immune/inflammatory diseases (e.g.
cacquired immune deficiency syndrome AIDS), rheumatoid arthritis and toxic
shock syndrome). This sequence encodes the human KLIMP protein described
in the method of the invention.

```
The present sequence is human kinesin-like motor protein (KLIMP) cDNA from Incyte clone 1281811 obtained from colon cDNA library (COLNNOT16). KLIMP and the corresponding polynucleotide are useful for diagnosis, treatment and prevention of disorders associated with decreased expression of KLIMP e.g. cancers (such as adenocarcinoma, leukaemia, lymphoma, melanoma, myeloma, sarcoma, teratocarcinoma, and, in particular, cancers of the adrenal gland), neurological disorders (such as epilepsy, ischaemic cerebrovascular disease, stroke, cerebral neoplasms, Alzheimer's disease, Pick's disease, Huntington's disease, dementia, Parkinson's disease, peripheral nervous system disorders,
                                                                                                                                                                                                                                                                                                                                                                                                                                                       leukaemia; lymphoma; melanoma; neurological disorder; epilepsy; ischaemic cerebrovascular disease; stroke; Alzheimer's disease; bick's disease; luntington's disease; dementia; Parkinson's disease; vesicular transport disorder; cystic fibrosis; diabetes mellitus; AIDS; Acquired Immune Deficiency Syndrome; microbial infection; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Nucleic acid sequences encoding a human kinesin-like motor protein (KLIMP) useful for the prevention and treatment of diseases associated with inappropriate KLIMP expression such as cancers and neurological

The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                New isolated nucleic acid detection reagent for detecting 1000 or more genes from brosophila and for elucidating cell signalling and cell-cell interactions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   245
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           305
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             66 ccgtggcgcaaaatgtattgtgcggatggaaggaaatcaaaccatcctcaccctcctcc 125
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        445

```
The invention relates to polynucleotides (I) encoding diagnostic and therapeutic (DTHP) polypeptides (II), which include e.g. enzymes, and proteins involved in growth and development and receptors. (I) and be used in the prevention, diagnosis and treatment of diseases associated with inappropriate DTHP expression. For example, (I) and (II) may be used to treat disorders associated with decreased polypeptide expression by rectifying mutations or deletions in a patient's genome, that affect the activity of the DTHPs, by expressing inactive proteins or supplementing the patient's own production of them. (I) and (II) may be used to treat diseases, for example, cell proliferative disorder, [crohn's disease, acquired immune deficiency syndrome (AIDS), lymphoma, leukaemia, autoimmune disorders, and respiratory disorders. Additionally, (I) may be used to produce the DTHPs, by inserting the nucleic acids into a host cell and culturing the cell to express the protein. (I) and

its complementary sequences may also be used as DNA probes in diagnostic assays to detect and quantitate the presence of similar nucleic acids in samples, and therefore which patients may be in need of restorative therapy. (II) may also be used as antigens in the production of antibodies against DITHPs and in assays to identify modulators of DITHP expression and activity. The anti-DITHP antibodies and antagonists may also be used to down regulate expression and activity. The anti-DITHP antibodies may also be used as diagnostic agents for detecting the presence of DITHPs in samples (e.g. by enzyme linked immunosorbant assay (ELISA)). AASJ0966-AASJ1196 represent human diagnostic and therapeutic (DITHP) polynucleotides of the invention.

The present invention describes the coding and protein sequences of the human kinesin-like protein HKLP. It is thought that the protein could be involved in neurological disorders, infertility, spontaneous abortion, neonatal chromosome disorders, aneuploidy and cancers. This is due to its function in the movement of microtubules. The protein shows homology to the murine KIFIA and KIFIB proteins. The sequences disolosed in the invention can be used in the isolation of similar human proteins and in vector production. In addition, the biallelic markers shown can be used
                                                                                                                                                                                                                                                                           1044 gcagctgataactatgatgaaaccctctcaactctgcggtatgcagatcgagccaagcac 1103
